

ALEXA - HOW TO CONNECT

The integration of CoolRemote with Alexa allows you to use voice commands to control your HVAC system, connected through CoolAutomation devices. Voice commands can be activated through any Alexa device.

To start the process of connecting your CoolRemote with Alexa, you will need the following:

- CoolRemote Account connected to at least one CoolAutomation device
- Amazon Account

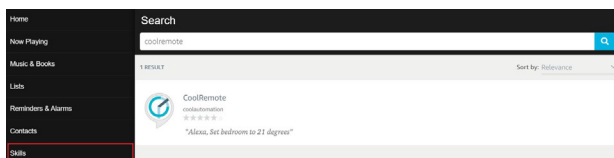

HOW TO LINK THE COOLREMOTE WITH ALEXA

Step 1: Log into the Amazon Alexa web portal using your Amazon account information (<https://alexa.amazon.com>)

Step 2: Click on the skills option from the menu on the left

Step 3: Use the search bar to find CoolRemote

Step 4: click on cool remote, and click enable:

Step 6: Click "Allow" and use your CoolRemote username and password to sync your CoolRemote Account with Amazon Alexa.

Step 7: Follow Amazon's instructions to discover the smart-home devices you can control with Alexa

You will now be able to use your Alexa to control any of your connected coolAutomation devices, by using the labels used within CoolRemote either through the web portal, Alexa device, or the mobile Alexa application.

LIST OF COMMANDS
