(6) **Power Connector**  
Used to connect 12-24V DC power supply adapter.

(7) **ETH Connector**  
RJ45 connector for ETH network.

(8) **Mini USB Device Connector**  
Used to connect CooLinkHub to PC USB Host for configuration and firmware updates.

(9) **LCD**  
Alphanumeric 8x2 characters LCD screen.

### 3.1 LCD Screen

CooLinkHub is equipped with an alphanumeric 8x2 characters LCD that presents most of the important device parametric and status information.

1. ETH network connection status  
   - Disconnected, Connected
2. CoolRmote cloud connection status  
   - Not connected, Connected, Connected, communication in progress
3. HVAC line communication status  
   - RX, TX
4. Every one minute IP address (if acquired) and S/N are displayed
5. Indoor unit UID (L2.001 on this picture)
6. Indoor unit status  
   - ON, OFF
7. Set temperature
8. Fan speed  
   - High, Medium, Low, Auto
9. Operation mode  
   - CL - Cool, HT - Heat, FA - Fan, DR - Dry, AU - Auto
4 CONNECTIONS

4.1 Communication Lines

CooLinkHub supports a number of communication lines intended for connection to PBUS interface as well as integration with Home Automation and BMS control systems.

4.1.1 PBUS

PBUS is a CoolAutomation’s proprietary bus interface, based on shielded 2-wired cable (AWG24). It utilizes daisy chain network topology.

PBUS is intended for connection of CoolPlug and ThermoPad devices to CooLinkHub. PBUS is a solution for complete integration of (multi) split HVAC units with Home Automation and BMS systems.

**PBUS specific failure codes**

- CP01 - CoolPlug has no connection to HVAC unit
- CP02 - No communication with CoolPlug device
- CP03 - CoolPlug device is in BOOT mode
- CP04 - CoolPlug is not properly configured

4.2 RS232 Port

RS232 Interface in CooLinkHub is available from the RS232/IO connector. RS232 harness, provided with CooLinkHub, routes RS232 signals to DB9 connector as shown below.

<table>
<thead>
<tr>
<th>RS232/IO Pin</th>
<th>DB9 Pin</th>
<th>Signal Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>±12V</td>
<td>TxD Data from CooLinkHub</td>
</tr>
<tr>
<td>2</td>
<td>3</td>
<td>±12V</td>
<td>RxD Data to CooLinkHub</td>
</tr>
<tr>
<td>3</td>
<td>5</td>
<td>GND</td>
<td>Ground</td>
</tr>
</tbody>
</table>

Maximal length of the RS232 Cable should not exceed 25m. The default CooLinkHub RS232 Port settings are:

- Baud Rate: 9600
- Data Bits: 8
- Parity Control: None
- Stop Bits: 1
- Flow Control: None

By default RS232 Interface is dedicated for ASCII I/F protocol.
4.3 Ethernet

CooLinkHub incorporates an IEEE 802.3 compatible 10/100 Mb/s Ethernet port available via RJ45 connector. Ethernet port has a following features:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max Ethernet Cable Length</td>
<td>137m</td>
<td>CAT5 twisted pair cable</td>
</tr>
<tr>
<td>Supported Bit Rate</td>
<td>10/100 Mb/s</td>
<td></td>
</tr>
<tr>
<td>Supported Ethernet Protocols</td>
<td>10BASE-T/100BASE-TX</td>
<td></td>
</tr>
<tr>
<td>Protocol Auto-Negotiation</td>
<td>Enabled</td>
<td>Against Link Partner</td>
</tr>
</tbody>
</table>

RJ45 connector comprises Link and Activity indication LEDs used as specified below.

<table>
<thead>
<tr>
<th>LED</th>
<th>Color</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link Led</td>
<td>Green</td>
<td>ON for good link, OFF for no link</td>
</tr>
<tr>
<td>Activity Led</td>
<td>Orange</td>
<td>BLINKING for Tx/Rx Activity</td>
</tr>
</tbody>
</table>

Ethernet interface is used by a number of protocol modules available in CooLinkHub:
- ASCII I/F (via [ASCII I/F IP Server](#)
- Modbus IP (see [Modbus Integration Guidelines](#)
- HDL buspro IP
- SDDP
- CoolRemote

Network setting of the CooLinkHub are controlled with `ifconfig` command.

4.3.1 ASCII I/F IP Server

ASCII I/F IP Server referenced as `aServer` is a classic row TCP/IP socket server. Aserver is started by CooLinkHub once the Ethernet link is established and IP address is acquired. Aserver has following default characteristics:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximal number of simultaneous connections</td>
<td>4</td>
</tr>
<tr>
<td>Default TCP/IP listening port</td>
<td>10102</td>
</tr>
<tr>
<td>Prompt character</td>
<td>enabled</td>
</tr>
</tbody>
</table>

Aserver can be configured with `set` command.

The screen shot below illustrates the connection to Aserver with PuTTY utility (CooLinkHub IP address in this example is 192.168.1.110).
4.3.2 **CoolRemote Cloud Connection**

CoolLinkHub is constantly maintaining connection with CoolRemote cloud server once TCP/IP networking with internet access is established. Connection is made via TCP port 10101 on CoolRemote cloud server side. Unless firewall is involved no special network configuration are required on client side.
5 ASCII I/F

ASCII I/F is a proprietary CoolAutomation's interface utilized by most of the CoolAutomation devices, including CooLinkHub. In CooLinkHub ASCII I/F interface is running over RS232 connection and TCP/IP network connection via Aserver.

5.1 General Definitions

5.1.1 Messaging

Communication between DTE and CooLinkHub via ASCII I/F protocol is based on text (ASCII) strings. Communication example is shown below:

```
> ls L2
L2.102 OFF 20C 27C Auto Cool OK - 0
Response
L2.103 OFF 20C 24C Low Auto OK - 0
OK
> Prompt
```

Command string sent to CooLinkHub must be terminated with <CR> (carriage return 0x0D) <LF> (line feed 0x0A) sequence or a single <CR> character. Strings from CooLinkHub (except prompt character) are always terminated with <CR> <LF>. Commands are case sensitive and should not contain leading or trailing spaces. The only allowed separator between command name and command parameter(s) is space (0x20) character.

Configuration setting echo (see set command), defines whether characters sent to CooLinkHub via RS232 interface are echoed back or not.

If ASCII I/F protocol is running over RS232 interface, prompt character '>' is unconditionally sent by CooLinkHub. In case of ASCII I/F IP Server prompt transmission is configurable by aserver prompt setting.

5.1.2 Exit Code

CooLinkHub can provide Exit Code in verbose (default) or numeric forms. Numeric form format is: 

```
ERROR:N,
```

where N is a number in range 0...999. Exit Code format can be configured with verbose setting (see set command).

<table>
<thead>
<tr>

<tr>
<td>252</td>
<td>Auto Visibility Failed</td>
<td>There was an error of visibility during link creation</td>
</tr>
</tbody>
</table>
5.1.3 **UID**

UID is used to identify indoor unit or a set of indoor units. UID has the following format:

<table>
<thead>
<tr>
<th>Line</th>
<th>dot</th>
<th>Indoor number</th>
</tr>
</thead>
<tbody>
<tr>
<td>L&lt;n&gt;</td>
<td>.</td>
<td>X YY</td>
</tr>
</tbody>
</table>

- Line is a CooLinkHub HVAC Line number like L1, L2, ..., L* - means "any line". To provide backward compatibility with CoolMaster and CooLink devices, Line number can be omitted from the UID.
- Dot is a separator between Line number and Indoor number. If Line number is omitted or has a L* form, dot must also be omitted.
- Indoor number is an indoor unit number in HVAC system. Indoor number can be *, that means "any"

**UID Examples:**
- L1.102 Indoor Unit 102 on line L1
- L2.003 Indoor Unit 003 on line L2
- L*100 Set of Indoor Units 100 on all lines
- L3.1* Set of Indoor Units 1xx on line L3 (L3.100, L3.101, ... )
- L4 All Indoors on line L4
- L* All Indoors on all lines
- 203 Similar to L*203 (for backward compatibility only)

**UID\_STRICT**

In some cases only specific indoor unit has to be referenced by UID. In this case it is required to use UID\_STRICT format: Ln.XYY, where * usage is prohibited and Line number can not be omitted.

### 5.2 Configuration Commands

#### 5.2.1 set

**SYNOPSIS**

```
set [<SETTING> <VALUE>]
set defaults
```

**DESCRIPTION**

Query or change CooLinkHub settings. Without parameters `set` command will list all supported settings and their values. To change setting use format with `<SETTING>` and `<VALUE>`. Some settings are read only (RO) and can not be changed. `set defaults` command will load default values to all settings.

<table>
<thead>
<tr>
<th><code>&lt;SETTING&gt;</code></th>

<td></td>
</tr>
</tbody>
</table>

* - Bold font emphasizes default values.

**EXAMPLE**

Disable echo

> set echo 0

OK

Change Aserver TCP port

> set aserver port 12345

OK

Load defaults

> set defaults

OK

Apply props visibility filter to status/control commands

> set filter visi 1

OK, Boot Required!
Set RS232 Interface to 19200, 8 data bits, even parity, 1 stop bit

> set baud 19200 8E1
OK

Set temperature scale to Fahrenheit

> set deg f
OK

Set power-up melody to 3

> set melody 3
OK

5.2.2 ifconfig

SYNOPSIS

ifconfig
    ifconfig <PARAMETER> <VALUE>
    ifconfig enable|disable

DESCRIPTION

Query or configure Ethernet network settings. Without parameters, ifconfig command will list current network configuration. To change configuration use format with <PARAMETER> and <VALUE>.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAC</td>
<td>RO</td>
<td>MAC address of the CooLinkHub ETH port</td>
</tr>
<tr>
<td>Link</td>
<td>RO</td>
<td>Indicates whether Ethernet link is &quot;Up&quot; or &quot;Down&quot;</td>
</tr>
<tr>
<td>IP</td>
<td>R/W</td>
<td>Static (fixed) IP address or DHCP</td>
</tr>
<tr>
<td>Netmask</td>
<td>R/W</td>
<td>Netmask address in case of static IP</td>
</tr>
<tr>
<td>Gateway</td>
<td>R/W</td>
<td>Default Gateway address in case of static IP</td>
</tr>
<tr>
<td>DNS1</td>
<td>R/W</td>
<td>Primary DNS address</td>
</tr>
<tr>
<td>DNS2</td>
<td>R/W</td>
<td>Alternative DNS address</td>
</tr>
</tbody>
</table>

Parameter IP can be set to DHCP, to work as DHCP client, or IP number for static (fixed) IP. In case of DHCP, Netmask and Gateway values are provided by DHCP server. By default CooLinkHub is configured to operate as DHCP client.

EXAMPLE

Query network settings

> ifconfig
MAC : 28:3B:96:00:02:0F
Link: Up
IP : 192.168.16.108 (DHCP)
Netmask: 255.255.255.0
Gateway: 192.168.16.254
DNS1 : 8.8.8.8
DNS2 : 8.8.4.4
OK

Configure fixed IP, Gateway and Netmask

> ifconfig IP 192.168.1.102
OK, Boot Required!
> ifconfig Gateway 192.168.1.0
OK, Boot Required!
> ifconfig Netmask 255.255.0.0
OK, Boot Required!

Configure DHCP client operation
> ifconfig IP DHCP
OK, Boot Required!

Disable Ethernet
> ifconfig disable
OK, Boot Required!

Change primary DNS address
> ifconfig DNS1 208.67.222.222
OK, Boot Required!

5.2.3 props

SYNOPSIS
propsprops <UID STRICT> <PROPERTY> <VAL>
props delall

DESCRIPTION
Query or change CooLinkHub internal database of indoor unit properties. Changes made in this
database have no impact on physical capabilities of related indoor units. Indoor unit properties record is
created only upon first update made in database for this unit.
In format without parameters props command will list all stored properties in a table view.

<table>
<thead>
<tr>
<th>PROPERTY</th>
<th>Mode</th>
<th>Value</th>
<th>Description*</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>visible</td>
<td>R/W</td>

5.3 HVAC Status and Control Commands

5.3.1 on

SYNOPSIS
`on [UID]`

DESCRIPTION
Turn on indoor unit(s).

EXAMPLE
Turn on indoor unit 102 on Line L1
```
> on L1.102
OK
```

Turn on all indoor units on Line L2
```
> on L2*
OK
```

Turn on all indoor units
```
> on
OK
```

5.3.2 allon

SYNOPSIS
`allon`
DESCRIPTION
Turn on all indoor units.

5.3.3 off

SYNOPSIS
off [UID]

DESCRIPTION
Turn off indoor unit(s).

EXAMPLE
Turn off indoor unit 102 on Line L1
>off L1.102   OK

Turn on all indoor units on Line L2
>off L2*      OK

Turn on all indoor units
>off          OK

5.3.4 alloff

SYNOPSIS
allon

DESCRIPTION
Turn on all indoor units.

5.3.5 cool

SYNOPSIS
cool [UID]

DESCRIPTION
Set indoor unit(s) operation mode to cool.

EXAMPLE
Set operation mode of the indoor unit 102 on Line L1 to cool
>cool L1.102   OK

Set operation mode of all indoor units on Line L2 to cool
>cool L2*      OK

Set operation mode of all indoor units to cool
>cool          OK

5.3.6 heat

SYNOPSIS
heat [UID]
DESCRIPTION
Set indoor unit(s) operation mode to heat.

EXAMPLE
Set operation mode of the indoor unit 102 on Line L1 to heat

> heat L1.102
OK

Set operation mode of all indoor units on Line L2 to heat

> heat L2*
OK

Set operation mode of all indoor units to heat

> heat
OK

5.3.7 fan

SYNOPSIS
fan [UID]

DESCRIPTION
Set indoor unit(s) operation mode to fan.

EXAMPLE
Set operation mode of the indoor unit 102 on Line L1 to fan

> fan L1.102
OK

Set operation mode of all indoor units on Line L2 to fan

> fan L2*
OK

Set operation mode of all indoor units to fan

> fan
OK

5.3.8 dry

SYNOPSIS
dry [UID]

DESCRIPTION
Set indoor unit(s) operation mode to dry.

EXAMPLE
Set operation mode of the indoor unit 102 on Line L1 to dry

> dry L1.102
OK

Set operation mode of all indoor units on Line L2 to dry

> dry L2*
OK

Set operation mode of all indoor units to dry

> dry
OK
5.3.9 auto

**SYNOPSIS**

auto [UID]

**DESCRIPTION**

Set indoor unit(s) operation mode to auto.

**EXAMPLE**

Set operation mode of the indoor unit 102 on Line L1 to auto

>auto L1.102

OK

Set operation mode of all indoor units on Line L2 to auto

>auto L2*

OK

Set operation mode of all indoor units to auto

>auto

OK

5.3.10 haux

**SYNOPSIS**

haux [UID]

**DESCRIPTION**

Set operation mode of the ThermoPad device(s) connected to PBUS line of CooLinkHub to auxiliary heat mode.

**EXAMPLE**

Set operation mode of the ThermoPad 083 on Line L2 to haux

>haux L2.083

OK

Set operation mode of all ThermoPad devices on Line L2 to haux

>haux L2*

OK

5.3.11 temp

**SYNOPSIS**

temp [UID] [±]<TEMP>

temp [UID] <TEMP.d>

**DESCRIPTION**

Change indoor unit(s) Set Temperature.

- In form temp [UID] [±]<TEMP>
  
  `<TEMP>` parameter must be decimal natural number. Command can work in relative or absolute manner. If plus `+` or minus `−` sign precedes `<TEMP>` parameter, it's value will be added to or substituted from the current Set Temperature value. Otherwise Set Temperature will be set to the given `<TEMP>` value.

- In form temp [UID] <TEMP.d>
  
  Set Temperature parameter `<TEMP.d>` is a fractal number with 0.1 precision. (In this case preceding `+` or `-` are not allowed). If HVAC system does not support 0.1 precision for the Set Temperature (see table below), the final value will be the nearest supported value.
### CoolPlug Type | Set Temperature Precision
--- | ---
CoolPlug ME 12 | 0.5°C
CoolPlug ME CN105 | 0.5°C
CoolPlug DK P1P2 | 0.1°C
CoolPlug DK S21 | 1.0°C
CoolPlug DKS | 1.0°C
CoolPlug FJ | 1.0°C
CoolPlug PN/SA/TO | 1.0°C

The **deg** setting (see **set** command) defines which temperature scale Celsius or Fahrenheit is used for **<TEMP>** and **<TEMP>.d** parameters value. (Examples below assume that temperature scale is Celsius).

**EXAMPLE**

Set indoor unit 102 on line L2 Set Temperature to 23°C

```
>temp L2.102 23
OK
```

Decrease all indoor units on line L2 Set Temperature by 2°C

```
>temp L2* -2
OK
```

Set all indoor units on line L2 Set Temperature to 24.5°C

```
>temp L2* 24.5
OK
```

Set all indoor units Set Temperature to 22°C

```
>temp 22
OK
```

### 5.3.12 feed

**SYNOPSIS**

feed [UID] [±]<TEMP>feed [UID] <TEMP>.d

**DESCRIPTION**

Provides Ambient Temperature suggestion for given indoor unit(s). If **<TEMP>** is zero CooLinkHub will stop suggesting Ambient Temperature. Suggested Ambient Temperature is not persistent and is lost (set to zero) after power reset of CooLinkHub.

- In form feed [UID] [±]<TEMP>
  - **<TEMP>** parameter must be decimal natural number. Command can work in relative or absolute manner. If plus ‘+’ or minus ‘−’ sign precedes **<TEMP>** parameter its value will be added to or substituted from the current Ambient Temperature suggested value. Otherwise it will be set to the given **<TEMP>** value.

- In form feed [UID] <TEMP>.d
  - Parameter **<TEMP>.d** is a fractal number with 0.1 precision. (In this case preceding ‘+’ or ‘−’ are not allowed).

It is not guaranteed that the Ambient Temperature reported by indoor unit will be equal to suggested Ambient Temperature provided with **feed** command. The **feed** command is supported by the following CoolPlug types:

### CoolPlug Type | Feed Support & Precision
--- | ---

© 2019 CoolAutomation
CoolPlug ME 12 0.1ºC
CoolPlug ME CN105 Not supported
CoolPlug DK P1P2 0.01ºC
CoolPlug DK S21 Not supported
CoolPlug DKS 0.1ºC
CoolPlug FJ (APG000 compatible) 0.5ºC
CoolPlug PN/SA/TO 1ºC
CoolPlug MH Not supported
CoolPlug HT 0.5ºC
CoolPlug GR 1ºC
CoolPlug LG 0.5ºC

The `deg` setting (see `set` command) defines which temperature scale Celsius or Fahrenheit is used for `<TEMP>` and `<TEMP.d>` parameters value. (Examples below assume that temperature scale is Celsius).

**EXAMPLE**
Suggest Ambient Temperature of 23.5ºC for indoor unit L2.102
```
>feed L2.102 23.5
OK
```

Decrease suggested Ambient Temperature for all indoor units on line L2 by 2ºC
```
>feed L2* -2
OK
```

5.3.13 fspeed

**SYNOPSIS**
```
fspeed [UID] <v,V|l,L|m,M|h,H|t,T|a,A>
```

**DESCRIPTION**
Set indoor unit(s) Fan Speed to:
- `v` or `V` - very low or quiet
- `l` or `L` - low
- `m` or `M` - medium
- `h` or `H` - high
- `t` or `T` - top or very high
- `a` or `A` - auto

Not all indoor units support Fan Speed options listed above. Set of Fan Speed options supported by indoor unit depends on specific indoor unit type capabilities. If requested Fan Speed is not supported by indoor unit, `fspeed` command may have no effect.

**EXAMPLE**
Set indoor unit 102 on Line L2 Fan Speed to low
```
>fspeed L2.102 l
OK
```

Set all indoor units on Line L2 Fan Speed to high
```
>fspeed L2* h
OK
```

Set all indoor units Fan Speed to medium
```
>fspeed m
OK
```
5.3.14 swing

SYNOPSIS
swing [UID] <h|v|a|3|4|6|x>

DESCRIPTION
Set indoor unit(s) louver position to:
- h - horizontal
- v - vertical
- a - auto (swing)
- 3 - 30°
- 4 - 45°
- 6 - 60°
- x - turn off louver swing

Not all indoor units support louver position options listed above or have louver position control at all. Louver control is a capability of the specific indoor unit type. If requested louver position is not supported by indoor unit, swing command may have no effect.

EXAMPLE
Set indoor unit 102 on Line L2 louver to horizontal position
>swing L2.102 h
OK

Set all indoor units louver to 30° position
>swing 3
OK

5.3.15 filt

SYNOPSIS
filt [UID]

DESCRIPTION
Reset Filter Sign.

EXAMPLE
Reset Filter Sign on indoor unit 102 on line L2
>filt L2.102
OK

5.3.16 ls

SYNOPSIS
ls [UID]

DESCRIPTION
Get indoor unit(s) status information. If UID is omitted, all indoor units will be listed.
Indoor unit status information has a fixed format. So every status field position in the output string is predefined and can be used for information parsing.

- Indoor unit status line layout with Celsius temperature scale
  0123456789012345678901234567890123456
  L2.102 OFF 20C 27C High Cool OK    - 0
• Indoor unit status line layout with Fahrenheit temperature scale
012345678901234567890123456789012345678
L2.102 OFF 120F 127F High Cool OK - 0

OK
```

**5.3.17 ls2**

**SYNOPSIS**

ls2 [UID]

**DESCRIPTION**

Same as `ls`, but with decimal precision in temperature fields.

• Indoor Unit status line with Celsius temperature scale

5.3.18  **query**

**SYNOPSIS**

```
query <UID_STRICT> <o|m|f|t|e|a|s>
```

**DESCRIPTION**

Query one of the status parameters for given indoor unit. (**UID_STRICT** parameter references a single indoor unit). Query result is printed as alpha-numeric value according to the table below.

<table>
<thead>
<tr>
